

Vertical SBX IP

Now small businesses can communicate and collaborate like never before. Leverage your communications investment by delivering voice and data over a single IP circuit, and deploy mobile teleworker options without the expense of moving to an all-VoIP system with Vertical's SBX IP converged telephony platform. Easy to install, manage and use, the SBX is an affordable, cost-effective IP key system with up to 48 extensions that delivers the same enterprise-class VoIP capabilities used by larger organizations.

The SBX's pre-configured database templates for key or hybrid configuration set up make self-installation and system administration simple. The SBX integrates smoothly with existing analog, T1/PRI, or SIP trunks so you can deploy the cost-savings benefits of VoIP immediately, or migrate at your own pace. It also supports a variety of endpoints – including analog, digital and IP phones – as well as softphones for mobile users.

The SBX IP comes standard with a complete business-class phone feature set:

Account Codes	CO Queuing	Headset Mode	Personal Messages
