WIRELESS HEADSETS

Many business people are spending less and less time at their desks. The demands of a successful business require employees to interact and cooperate with different departments and teams, and this often involves moving around. Wireless capabilities provide availability and freedom of movement. Now you can stay in control of your communications without being chained to your desk.

Jabra wireless headsets consistently deliver high quality sound up to 450 ft from your desk. This means you can move freely between your office and meeting rooms, using just one headset for all your calls. Your hands are always free, making it possible to search for documents, make copies or enter data on your PC while talking on

the phone. Wearing a wireless headset lets you provide better customer service, because you can answer calls even when you're away from your desk, and waste less time having to call people back.

Jabra wireless solutions give you unsurpassed freedom of movement – around the office, on the road – or both.
